

# Cleaning and disinfecting advice

## olefin wallcovering

2024

### general

- Remove contaminants or dirt as soon as possible.
- Remove wet contaminants or dirt as much as possible by using an absorbent material.
- Always work from the outside inwards when cleaning to ensure that the stain is kept as small as possible.
- General cleaning of olefin wallcovering should be done with mild soap and warm water.

### cleaning instructions

- Remove accumulated, dry dirt using a soft (natural) sponge or a soft cloth.
- Gently wipe the area clean with a sponge or soft cloth with a mild detergent or Vescom Cleaner. Clean from the bottom of the wall upwards. Test in advance how this will affect the wallcovering by trying it on a hidden spot on the wallcovering.
- Then clean thoroughly with a sponge or soft cloth and clean water from top to bottom.
- Dry the wallcovering carefully with a soft, lint-free absorbent cloth.
- Repeat the cleaning procedure if necessary.
- Repeated use of stronger cleaning agents in the same area may cause the wallcovering to lose its homogeneous appearance.
- It is especially important to immediately remove materials that contain colours or solvents, such as ballpoint pen ink, markers, paints, and some foodstuffs.

- Excess contaminating materials, such as chewing gum, chalk, paint or tarry substances, should be carefully scraped off before making any other cleaning attempts.
- Do not use steel wool, sandpaper or scouring pads as these may damage the image and the textured surface.
- Never touch olefin wallcovering with (pure) alcohol.

### **approved Ecolab cleaners**

In cooperation with Ecolab the following cleaning products have been tested and were found to be safe for use on Vescom olefin wallcovering:

- Disinfectant cleaner
  - DrySan Oxy
  - Mikro-Quat Classic
  - Mikro-Quat Extra
  - Mikro-Quat NF
- Disinfectant
  - Sanichlor
- Maintenance cleaning
  - MAXX Magic2
  - MAXX Brial2
- Odour control
  - Oasis Pro White Cotton
